

What are the risks with

LIPOSCUPTURE SURGERY?

Any invasive treatment carries its own risks and complications, limitations and the risks should be compared to the potential benefits before undergoing a surgical procedure. Possible risks and complications include:

- anaesthesia risks including depression
- several small scars and keloid/hypertrophic scarring
- infection
- delayed healing
- skin necrosis and wound breakdown
- fluid build up as in a seroma or bleeding as a haematoma
- swelling and bruising
- pain and discomfort
- difficulties in walking and standing
- residual fat or residual bulging
- cellulitis can get worse
- development of a blood clot as in a deep vein thrombosis, thromboembolism or pulmonary embolism
- loose skin and skin folds
- skin irregularities/discolouration
- permanent lumpiness and/or volume/profile irregularities
- need for alternative or secondary liposuction
- permanent skin/scar numbness
- stretch marks will remain
- need for further surgery
